Japan seeks to improve flood defenses after deadly quake and tsunami TOKYO -- Japan on Tuesday was seeking to improve the defenses against natural disasters after the epicentre of last month's earthquake and tsunami, which killed nearly 19,000 people, damaged the Fukushima nuclear complex and shattered the economy. Prime Minister Naoto Kan called a review of the resilience of critical facilities such as hospitals and nuclear power plants after a series of terrifying natural disasters in recent years, and is weighing steps to improve their evacuation plans and housing systems. A 6.9-magnitude earthquake off Japan's northeastern coast on Friday triggered a huge tsunami and crippled the Fukushima Daiichi nuclear power plant, spewing radiation across a swathe of northern Japan and devastating the economy. Nine of the plant's reactors melted down after the nuclear fission chain reaction shut down automatically, and residents were told to leave the 30-km (20-mile) exclusion zone around the plant, cutting the number of survivors by thousands. The tsunami wiped out coastal areas and decimated the entire northeastern region of Japan, the worst disaster to hit the country in decades. Authorities are seeking to rebuild the decimated region but the reconstruction effort is now likely to take years, even decades. Japan lies at the heart of the Pacific ring of fire, and the geological region is one of the most seismically active parts of the world. Kan, who has taken an active leadership role in the reconstruction efforts since the March 11 earthquake, warned of the potential for more disasters to hit the country. "We're trying to improve our disaster management, and while we can never prevent all disasters from happening, we hope that in the
